

ITL - Israel Testing Laboratories

Ophir Gamliel
CEO

Israel Testing Laboratories Ltd. (ITL) provides international standards certification of electronic and electrical products for Israeli exporters. The company specializes in a range of sectors: medical, electronics, communications, machinery, and telephony.

International Presence

ITL has international certification to conduct standards testing and provide consultancy in accordance with the requirements of the target countries. The company accompanies the Israeli product from the initial stages through to the end so that it complies with international standards. ITL is certified by international standards agencies to provide standards certificates for the Israeli product in order to reach the market quickly, thereby saving time and money.

The company has been authorized by many international standards agencies to award global standards certificates for Israeli export products in a number of industries.

ITL represents the following national and international standards agencies, among others: Underwriters Laboratories (UL), TÜV, NEMKO, and the Canadian Standards Association (CSA). Furthermore, ITL is accredited by the American Association for Laboratory Accreditation (A2LA) and the Israel Laboratory Accreditation Authority (ISRAC). Finally, ITL is a laboratory recognized by the US FCC, Japan VCCI, Israel Ministry of Communication, and Ministry of Commerce and Industry.

Advising Companies

In addition to being an Israeli standards institute whose certification

is recognized by most of the countries of the world, ITL is an expert consultancy company for Israeli manufacturers in all matters pertaining to technological compliance with the specifications of standards agencies from around the world. These conditions make possible early preparations to comply with the standards specifications of the target country, thereby saving precious time in foreign customs warehouses and tense and costly waiting to obtain standards documentation without which the product cannot be distributed in the target country. Thus, ITL shortens time to market for Israeli manufacturers.

ITL accompanies the Israeli export product from beginning to end - from the design stage through all production stages, including the critical standards testing at ITL's laboratories, until the delivery of permits at the customs offices and importers in the various countries. ITL is a one-stop-shop built to provide a complete basket of services in its field under a single roof: accompanying a product from beginning to end, including testing it at the company's laboratories and providing international standards certification for the product.

International Certification

ITL specializes in providing services in the following fields: product safety, electromagnetic compliance, compliance of radio and telephony products to the various standards specifications, and environmental compliance.

ITL operates innovative and advanced laboratories in two locations: at the Telrad Networks Ltd. compound in Lod, and in Kfar Bin Nun. The company's 30-person team is experienced and qualified in international standards, and is committed to provide efficient, friendly, reliable, quick, and professional service.

Ophir Gamliel, CEO of ITL since 2006, was born in Israel in 1965. He completed his military service in the special Infantry Brigade, and does his reserve military service at the IDF Computer Center. He has a B.Sc. in electricity and electronics from the University of Maryland and a M.Sc. in computer science and communications from Johns Hopkins University in Baltimore. Ophir has a diverse global experience as he held positions, in the US, as a senior engineer at Cisco Systems Inc. and Sprint Inc., and a Sales director at Nortel Networks Inc. in Virginia. In addition, Ophir served as a senior manager at Cisco Systems Israel Ltd., and Vice President Sales at Globcall, a subsidiary of IDB Holdings Company Ltd.
